## Satamatics SSAS and vessel tracking

Recent changes in the IMO regulations have led to the mandatory fitting of Ship's Security Alert Systems (SSAS) on board ship. This should, on many vessels, be completed by the first survey after 1st July 2004. Also in the future is a requirement for long range tracking of ships at sea.

Satamatics will provide equipment which can fill both requirements with the **Ocean Alert SSAS** and the **SAT 101**.

**Ocean Alert** is based on the Inmarsat D+ service and meets or exceeds all mandatory requirements for SOLAS Reg. XI-2/6, guidance notes and performance standards for Ship Security Alert Systems.

Cost effective SSAS solution.

Reliable Message delivery technology.

SAT101 satellite terminal.

Internal battery.

Global coverage with automatic roaming.

Precise location and status delivered to desktop via web, e-mail or SMS.

Bundled end to end solution including reporting service, airtime, hardware and alert notification.

No monthly airtime fees.

Inmarsat type approved.

Type approved to IEC 60945.

Low power consumption and proven network reliability make Ocean Alert a cost effective, low maintenance solution to meet ship security requirements. In addition it provides useful vessel monitoring and long range identification capability.
