## Lilley & Gillie introduce new range of products.

Since the take over of Walker Instruments Lilley and Gillie have been working hard at rationalising and re-engineering the complete range. This has resulted in the discontinuation of several models and the introduction of an exciting new range.

The Mk 2002 magnetic compass outfit for commercial vessels under 150 grt, fishing vessels and workboats under 35m has been completed and is now available.

The Wind Systems are now configured such that any sensor can be interfaced to any wind display through an Indicator Interface Unit. There is a range of analogue and digital indicators.

Similarly with the Walker Electromagnetic Logs there are five transducers which can all be used with either the 4020 or the 7070 Control Units. The range of transducers allows for installation in steel, alloy, wood or fibreglass hulls in both fixed or retractable types.

Other indicators and interfaces are in development at present.

For further information on this range of products please contact us.

Lilley & Gillie Walker products
